Handling and lifting

BITO now offers solutions for efficient in-house transport

Transportation of products in industrial and commercial environments is far more efficient with reliable equipment. For this reason, BITO-Lagertechnik Bittmann GmbH has considerably enlarged its range of products in the in-house transport segment. As storage and order picking specialist, BITO knows exactly which requirements have to be met. In line with this, all stock trolleys, order picking and transport trolleys, lift trucks, bin trolleys, sack and board trucks of the BITO range are highly functional and easy to handle.

The stock trolley models Juniorflex and Seniorflex allow easy steering and precise manoeuvring. They are frequently used for manual order picking into bins and containers. The Juniorflex trolley's outside dimensions are 700 x 405 x 1.560 mm (length x width x height). It has a load capacity of 35 kg per level and a total load capacity of 150 kg. The basic model can be upgraded by a push and pull handle, a memo board, wire or basket levels and a tow bar with tow ring. The Seniorflex model is 625 mm wide and can carry 150 kg per level or 400 kg in total. Accessories for this model are a push and pull handle, a memo board, a wire-mesh back panel and an additional wire level. The fold-up step with 3 anti-slip treads allows particularly convenient access. Both models have a base from square steel tube with welded-in wire-mesh deck. The wire-mesh side panels are bolted to the base. The entire trolley surface has a shiny galvanised, chrome plated finish. 4 rubber-tyred castors with a diameter of 125 mm give a smooth, quiet ride.

The new transport trolleys with a load capacity of 250 respectively 300 kg according to model are easy to manoeuvre and can be nested for saving space. The BITO models either have a wire basket for smaller parts or an additional fold-up top shelf. A PVC front bumper and a double wire lip all around the platform protect products and the trolley itself. Instead of a PVC front bumper, the models without basket have a robust, oval steel tube platform edge. Both models have a shiny, chrome plated finish protected by a layer of varnish.

The BITO open and closed deck trolley range has been completed by a universal trolley for Euro-sized stacking containers which is supplied with 4 swivel castors and a glass fibre reinforced polyamide frame. The trolley dimensions accommodate either one stacking container sized 600 x 400 mm or two stacking containers sized 400 x 300 mm.

Safe transport of goods and equipment is also guaranteed by the foldaway trolley range which features the aluminium trolley version as well as a version from steel sheet with pressed steel deck, factory-fitted anti-slip mat, buffering all around the deck edge and foot operated pedal locks. All trolleys meet the European standard EN 1757-3.

Also new to the product range in the in-house transport segment are sack trucks and board trucks. Depending on the model, BITO sack trucks have a load capacity of up to 300 kg, the new board truck can carry as much as 350 kg.

Foldaway trolleys as well as sack and board trucks are supplied with a 5 year warranty.

Apart from the standard hand pallet lift truck, BITO also offers a lift truck model with digital scales. The large and easy to read display indicates weights in 200 gr steps. The built-in rechargeable battery and a separate battery charger are included in the delivery. The pallet lift truck with scales has a maximum load capacity of 2000 kg. Also new to the range are two hydraulic stackers with a lift height of 900 or 1600 mm and two lift speeds. Loads of not more than 100 kg can be lifted at a higher speed. Both models have a load capacity of 1000 kg and have a high stability. Tempered axles and a pressure control valve to prevent overloading make for a long service life.

Picture subtitles:**Seniorflex stock trolley**

According to your requirements, the Seniorflex stock trolley can be fitted with push and pull handle, memo board, wire-mesh back panel, an additional wire shelf and a fold-up step.

Transport trolley

The nestable BITO transport trolley has a load capacity of up to 300 kg.
