# **Ergonomic working conditions**

## **Physiotherapists recommend workstation system BITO-TEC**

Optimum working conditions, particularly in order to prevent health damage, are among the main concerns in many companies. BITO-Lagertechnik Bittmann GmbH have developed the flexible workstation system BITO-TEC which suits almost any office, industry and workshop application. B.O.R. GmbH & Co. KG in Duisburg, the centre for medical and physical rehabilitation of persons suffering from work-related diseases, has awarded a certificate to the BITO-TEC workstation system confirming that "multiple layout possibilities and flexible height adjustment make the BITO-TEC workstation system ideally suited for ergonomically sound working in office and workshop environments".

The BITO-TEC system convinces with its unique adaptability and ease of use. Depending on the requirement, one and the same frame construction can be adjusted for an application as PC station, workstation for sitting or standing use or as packing station. The sturdy steel framework can be equipped with one or two worktops and various types of shelf levels. Worktops and shelf levels can be height adjusted in 60 mm increments. Upon request, BITO-TEC workstations can also be supplied as electric version which allows worktop adjustment at any required height. Individual operator requirements can thus be ideally taken into account. All steel components are supplied with aluminium grey epoxy-coating, the worktops are finished with beech laminate.
