
BITO enlarge their successful »RK« storage and handling bin series by a new width option: RK's are now available with a width of 156 mm

Pulling out all the stops

Applicable for use in shelving as well as horizontal and vertical carousels in production and distribution areas, the storage specialist BITO-Lagertechnik Bittmann GmbH has added 156 mm wide bins to their storage and handling bin series »RK«. With the introduction of 80 mm high RK's some time ago, this is the second enlargement of the »RK« series. The 156 mm wide bins close the gap between the narrow width option (117 mm) and the broad width option (234 mm).

Six RK bins to fit onto a 1,000 long shelf

The width option 156 mm is ideal for the standard shelf or storage tray length of 1,000 mm. This length accepts six RK bins which allow to make maximum use of the available shelf space. Depending on the goods to be stored or supplied, there is the choice between the 300 mm and 400 mm deep RK option, each 156 mm wide and 90 mm high. In the course of 2008, further RK variations will follow, providing customers with a fully compatible bin system with a lot of size options.

Same size and or mixed size bin

As 1,000 mm long shelves or trays can accommodate both, an assortment of same size bins, i.e. four RK's with a width of 234 mm, six RK's 156 mm wide or eight RK's 117 mm wide, as well a mix of all three width options, all available in several RK length options, either 80 or 90 mm high, your storage installation will be able to meet all requirements. A choice of accessories such as longitudinal dividers, cross dividers with dove-tailed base and lids/dust covers complete the range in an ideal way to allow optimum storage of all kinds of storage goods.

Due to the wide range of possibilities, the BITO RK series allows appropriate and safe storage of unit loads as well as of bulk goods, of small parts or of small devices susceptible to damage, of CD's and DVD's. The new RK bin with a width of 156 mm and a depth of 300 mm accepts f. ex. exactly 24 or, depending on outer packing, 48 CD's.

The original storage and handling bin from BITO: functionality guaranteed

RK bins can be equipped with a safety handle which provides a "drawer function" and prevents the bins from being pulled out by accident. Fitted with a spring mechanism, the safety handle lowers automatically when the bin is pushed into the shelf without the need of inserting the bin at a very steep angle which is very helpful if the bin is filled with bulk goods. Manufactured from high quality polypropylene and offering a lot of extra features, BITO RK's are a high tech product with a long service life. Launched in the beginning of the 90ies, the RK series is now industry standard. For good reason, BITO recommend their "original RK". Nationally and internationally, there are many imitations on the market, however by no means with the same quality.

Picture underline:

The storage specialist BITO-Lagertechnik have added a new bin model with the width of 156 mm to their RK range. This new width option fills the gap between the 117 mm and the 234 mm wide RK bins.
