

50 years of success in the storage and handling industry:

BITO publishes anniversary edition of the PROJECT GUIDE, the manual on storage and order picking systems complete with case studies

Celebrating 50 successful years in the storage and handling industry, the Meisenheim-based storage specialist BITO-Lagertechnik provides a comprehensive manual on storage and order picking systems with their latest catalogue "PROJECT GUIDE." This well structured book invites readers to take a deeper look into the world of storage technology by explaining in detail the various storage systems, their features and advantages. No matter in which industry the reader is at home – this anniversary issue provides the matching solution for the application in question. This makes the manual a valuable planning aid for your projects.

Whether the reader favours shelving or pallet racking, a multi-tier installation or a mezzanine platform, cantilever racking or even an automated storage installation – each storage system comes with plenty of illustrations and easy-to-understand descriptions. An introduction informs on the suitability for a certain type of use, such as for a supply, order picking or as buffer store, on service options as well as on the space utilisation ratio of each system. The reader will also be given information on the most frequent areas or industries of application and on the type of goods which would typically be stored in the various systems. Illustrations show up to what degree a storage system makes use of the available storage surface and volume. A list of general and BITO specific advantages of a system as well as selected case studies complete the presentation of each system. Case studies, whether on a multi-tier installation for spare parts in the consumer electronics industry, a mezzanine platform in a logistics centre for drilling and counterboring tools or on a carton live storage installation for organic foods, follow a consistent scheme: they start with the system's features, then explain the installation's function for the customer's operations and finally lists the benefits of the storage system for the customer.

The clear structure and a lot of photos to illustrate the case studies quickly provide customers with the information they need for their specific application and will be a valuable help in choosing the system or a combination of several systems which will exactly meet their requirements.

Customers and anyone interested in our products will obtain competent advice from our local BITO representatives or from our BITO service centre. Call 06753/1220 to obtain free of charge the anniversary edition of the BITO PROJECT GUIDE or send us a mail on info@bito.de.
